

TSA Air Cargo Screening Technology List (ACSTL)

Version 9.0 as of 02/07/2014

07 February 2014

Document Purpose: This document serves as an official guide for regulated parties to use when procuring screening equipment in accordance with TSA approved security programs. **Any technology purchased off this list must be utilized in accordance with measures outlined in a screener's Standard Security Program.** This list does not apply to equipment owned by TSA or equipment used in TSA sponsored tests or test beds.

Document Format: The document is divided into three sections: a qualified technology section, an approved technology section, and a grandfathered technology section. The qualified technology section specifies equipment, by technology, which has undergone a formal TSA sponsored test process and is deemed qualified for screening operations. When procuring equipment from the ACSTL, regulated parties are encouraged to select equipment from the qualified technology section. The approved technology section specifies equipment, by technology, which has been conditionally approved for screening operations and is currently undergoing or scheduled for field test activities. This equipment has up to 36 months from the date when it was added to the approved technology section to successfully pass TSA's suitability based field test activities. If it is unable to pass field test activities within the prescribed 36 months, it will be removed from the approved technology section on the specified expiration date. Due to this fact, regulated parties who procure equipment from the approved technology section do so at their own risk. Additional technologies may be added to the approved technology section at TSA's discretion. The grandfathered technology section specifies equipment, by technology, which is currently approved to screen cargo but has a stated expiration date. This allows regulated parties who are using the grandfathered technology an opportunity to gradually phase out the equipment and transition to devices listed in the qualified or approved sections. Due to this fact, regulated parties should not purchase equipment from this section; rather, they should reference the qualified or approved sections for their procurement needs.

Disclaimer: The approved technology section reflects equipment which has successfully passed Stage I of the qualification testing process. TSA reserves the right to remove equipment from this section if the equipment fails Stage II test activities. The grandfathered technology section reflects equipment which is currently approved to screen cargo but has a stated expiration date. TSA also reserves the right to remove equipment from the approved or qualified section, or revise an expiration date in the grandfathered section, due to a device's inability to meet more stringent performance parameters associated with emerging threats. Should such a situation occur, TSA will issue specific guidance on how previously purchased equipment may be used.

Note: The Top Assembly Part Number is the only qualified configuration for each Device Model Number. Models with different part numbers are not considered qualified screening devices.

Version of the
TSA Air Cargo Screening Technology List (ACSTL)

Qualified Technology: The following list of **Non-Computed Tomography (Non-CT) Transmission X-ray Devices, Explosive Trace Detection (ETD) Devices, Explosive Detection Systems (EDS), and Carbon Dioxide (CO₂) Monitors** specifies equipment which has undergone a formal TSA sponsored test process and is deemed qualified for screening operations. When procuring equipment from the ACSTL, regulated parties are encouraged to select equipment from the qualified technology section.

NON-Sensitive Security Information (SSI)
Version of the
TSA Air Cargo Screening Technology List (ACSTL)

Grandfathered Technology: The following list of **Explosive Trace Detection (ETD) Devices and Electronic Metal Detection (EMD) Devices** specifies equipment, by technology, which is currently approved to screen cargo but has a stated expiration date. This allows regulated parties who are using the grandfathered technology an opportunity to gradually phase out the equipment and transition to devices listed in the qualified or approved sections. Due to this fact, regulated parties should not purchase equipment from this section; rather, they should reference the qualified or approved sections for their procurement needs.

¹ There are currently no screening devices in the grandfathered section.
